

KING INDUSTRIES
JOB DESCRIPTION
ENVIRONMENTAL ENGINEER/COMPLIANCE SPECIALIST

Working Location- Norwalk, CT

King Industries is actively seeking to hire an Environmental Compliance Specialist. Ideal candidates should have a Bachelor of Science degree in Chemical Engineering or Environmental Engineering or an equivalent with relevant experience. Candidates should also have some understanding of sampling equipment, pumps, and wastewater treatment. Responsibilities will include developing and maintaining a computerized system for logging all inspections, managing wastewater discharge compliance in accordance with our State and NPDES Discharge permit as well as other responsibilities listed below. The Environmental Compliance Specialist will be joining the Environmental department.

Skills Required:

- Excellent verbal and communication skills.
- Excellent technical and computer skill.
- Excellent organizational skills and attention to detail.

Education and Experience Requirements:

- BS in Chemical Engineering, Environmental Engineering, or equivalent degree.
- Mechanical understanding of sampling equipment, pumps, wastewater treatment systems, etc.
- Experience in environmental permitting is a plus.

Duties and Responsibilities:

- Manage wastewater discharge compliance in accordance with our NPDES River Discharge permit and our State Sewer Discharge permit (5 discharges total).
 - Schedule sampling: ensure sample bottles, preservatives and sampling sheets are available; assist in performing sampling, send samples to laboratories for analysis; check analytical reports.
 - Prepare and submit monthly discharge monitoring reports to CTDEEP.
 - Maintain sampling and analytical records.
 - Prepare instructions and forms as necessary; maintain existing instructions and forms including annual reviews.
 - Perform training.
- Manage compliance with Wastewater General Permits including sampling and inspections.
- Develop and maintain a computerized system for logging all internal inspections and sampling records
- Manage on-site waste storage and waste shipments.
 - Keep records of waste generation and shipments.
 - Maintain Excel spreadsheets for tracking waste generation and waste shipments.
 - Maintain labels for wastes.
 - Generate reports on waste generation by specific area, i.e., process, laboratories, buildings.
 - Tracks drum pump-outs to hazardous waste tanks.
 - Manage waste shipments including scheduling and preparing shipping paperwork.
 - Develop, implement and track minimization programs.

- Perform annual waste assessments.
- Prepare instructions and forms as necessary; maintain existing instructions and forms including annual instruction reviews.
- Perform training.
- Assist Environmental Foreman in the plant with waste drum management including daily container management, preparing shipment, performing inventories and loading tank truck.
- Prepare reports including TRI Report, Tier II Report and Biennial Hazardous Waste Report.
- Assist in the preparation of permits and permit renewals.
- Assist in fugitive and stack emissions monitoring.
- Assist with on-site subsurface remediation work including taking readings from monitoring recovery wells and ensuring that recovery systems are functioning.
- Assist in performing daily and weekly site inspections required by RCRA, CWA and CAA.
- Assist in performing spill investigations.
- Participate in company wide effort to promote compliance with ISO standards (9001/14001 and 45001).
