Grease Additives
High Performance Additives and Base Stocks
NA-LUBE®, NA-SUL® and K-CORR®
King Industries, Inc. is a leading global developer, manufacturer and marketer of additives and synthetic base stocks for the lubricant and grease industry. For many years, King Industries has been the reliable supplier of the NA-LUBE®, NA-SUL® and K-CORR® product lines. King continually develops high quality additives and base oils to fulfill the industry’s needs.

The lubricating grease industry continuously requires higher performance and cost-effective products. The performance of a grease is influenced by many factors, including thickener type, base fluid, base grease manufacturing method and the type and amount of additives used. King Industries offers a broad range of additives that are used in the formulation of greases.

Additionally, King offers the industry’s broadest line of synthetic alkylated naphthalene base oils and base oil modifiers under the NA-LUBE KR trade name.

NA-LUBE KR series of alkylated naphthalenes are synthetic fluids with outstanding thermal and thermo-oxidative stability. They exhibit excellent performance properties when used as the sole or co-base oil for grease applications. Alkylation of naphthalene is a core technology of King Industries; thus, we are able to offer customized products designed to meet our customers’ demanding application requirements.

These curves compare five lithium 12-hydroxystearate greases made with different base oils and base oil blends.

Oxidation initiates almost immediately at 180°C for the greases made with Group III and PAO.

*A small introduction of alkylated naphthalene NA-LUBE KR-015 into the PAO shows immediate improvement.*

50/50 NA-LUBE KR-015 and PAO shows no oxidation after 40 minutes at 180°C under these conditions.
NA-LUBE AW-6000 series of ashless antiwear and extreme pressure additives is based on a variety of phosphorus, sulfur and nitrogen chemistries. If ashless systems are desired, these additives are effective alternatives to metallic phosphates. Typical treat levels are 0.5% to 2.0% by weight.

**Performance in Lithium 12-OH (NLGI #2)**

NA-LUBE AW-6310 is an ashless multifunctional additive that provides excellent rust protection to greases when tested in the presence of 5% synthetic sea water. In the study below, NA-LUBE AW-6310 is able to provide corrosion-free bearing races, as well as antiwear protection.

<table>

**Extreme Pressure Additives**

**NA-LUBE EP-5000** series of extreme pressure additives consists of light-colored, low-odor sulfurized olefins and sulfurized fatty acid esters that provide excellent extreme pressure properties. NA-LUBE EP-5210, an inactive sulfur carrier, and NA-LUBE EP-5415 are ideally suited for greases and work extremely well when combined with other extreme pressure and antiwear additives. Typical treat levels are 3.0% to 5.0% by weight.

**NA-LUBE ADTC** is an ashless dialkyldithiocarbamate offering extreme pressure, antiwear and antioxidant properties in greases whenever heavy metals are not desired. Because of its chemical structure, NA-LUBE ADTC is ideally suited for formulating antimony-free and low ash containing EP greases. Typical treat levels are 1.0% to 5.0% by weight.

**Antioxidants**

**NA-LUBE AO** series consists of liquid and solid aminic and phenolic antioxidants that are effective stabilizers for a broad range of greases. All products are ashless, non-corrosive and have excellent solubility in petroleum and synthetic base stocks. Typical treat levels are 0.2% to 1.5% by weight.

NA-SUL rust and corrosion inhibitors are a broad range of high performance additives based upon dinonylnaphthalene sulfonates (DNNS). Many different NA-SUL grades are used in greases depending upon the type of thickener, the base fluid, the level of rust protection desired and the performance requirements other than corrosion protection.

**Rust and Corrosion Inhibitors**

*K-CORR* and *K-CORR G* rust inhibitor systems are specifically designed to provide outstanding rust protection to greases exposed to severe salt water conditions. Test results are available in lithium 12-hydroxystearate, lithium complex, polyurea and calcium sulfonate greases with 5% and 100% synthetic sea water and 3% sodium chloride.
