NACORR 4426 is an emulsifiable corrosion inhibiting additive that provides excellent rust and corrosion prevention in waterborne emulsion coatings. It is a proprietary preparation of a sodium salt of an aromatic sulfonic acid and polymers.

ADVANTAGES:
- Excellent salt fog and humidity protection
- Excellent stability in emulsion systems
- Effective on steel, galvanized steel and aluminum
- Especially effective in low solids waterborne systems

TYPICAL PROPERTIES:

APPLICATIONS:
- Emulsion based protective coatings and low solids waterborne systems

TYPICAL USAGE LEVELS:
- 4-10% based on the total weight of paint if used as the sole anti-corrosive agent.
- When used in combination with other types of corrosion inhibiting pigments, NACORR 4426 should be added at 25-50% of the total anti-corrosive pigment loading.

INCORPORATION:
- NACORR 4426 should be post-added to the coating with good shear/agitation.

SHELF LIFE:
- 18 months from the date of manufacture, when stored at ambient conditions in the original container.

HANDLING & STORAGE:
- Avoid breathing vapors. Keep the container tightly closed. Store at room temperature away from direct sunlight. For further information, please consult the Safety Data Sheet.

REGULATORY:
- Please refer to Section 15 of the Safety Data Sheet for information.
